

# REEDGEEK®

## The Most Simple & Effective Tool For Double Reed Players, Too!

The REEDGEEK® “Universal” Tool was designed to help all woodwind players (both students and professionals), adjust single and double reeds to achieve better reed performance more simply and accurately than any other reed tool on the market today. It has quickly become an industry leader and is used by the world’s top woodwind professionals.

With its proprietary true edge-retention technology and superior U.S. steel blends, the REEDGEEK® rivals even the most expensive reed knives sold today, with no sharpening required and no dangerous knife blade to slice delicate fingertips. On this miracle bar all edges are created equal and can be used by both single and double reed players as one would use traditional knives to adjust and balance reeds.

The tip of the tool features an engineered radius that can be used for precision scraping, including balancing the tip, adjusting the heart or other fine adjustments. The radius allows single point contact for scraping very precise areas of the reed quickly. To make your scrape, push or pull the tool or move in a circular motion as you would use a pencil eraser.

On each side of the radius are contoured blades that can be used to adjust or modify the rails of the reed or profile tip corners. The small blade adjusters cut quickly with great control. These adjusters are also strong enough to remove or reshape bark areas. Too much pressure can gouge the cane: start with light pressure.
